<b>Final Project 70%</b>	
<b>Presentation 30%</b>	
<b>Final Letter Grade:</b>	

**Advisor's Name&Surname:**

**Date:**

**Advisor's Signature:**

## **Explanations:**

The MIS 4496 grades are individual. In grading a project, the following elements are taken into consideration:

**A. Final project report 70%**

- Conformity of the completed project outcomes and deliverables (program code, manuals, etc.) with the project proposal, project statement and the project's compliance with the departmental requirements 10%

- Difficulty and innovation 15%

- Quality of the project outcomes and deliverables (includes not only the quality and operability of the final product but also quality of design, implementation, testing, etc.) 35%

- Quality of the written project report (with attachments) – format, appearance, language, clarity of expression 10%

**B. Project presentation 30%**

**Total: 100%**

Depending on the specific circumstances the jury may modify the relative importance and weights of these factors.

The project work culminates in the preparation of the Final Project Report and the public Project Presentation and Defense.

Project presentations (defenses) take place during the examination period of the Spring semester or in the week following that period. The exact dates for all project presentations are posted by the project coordinator not later than the third week of the Spring semester.

The members of the jury for a given project receive a hard copy of the Final Project Report not later than one week before the project presentation.

Generally, to pass MIS-4496 your product must be operational and meet the Project Proposal specification by the day of the Project Presentation.
